

HELLO HACKERS

Hello Hackers

This was the first module that had to be attempted on pwn.college and it was on executing commands with arguments in the command line.

Intro to Commands

The description of the challenge states that invoking the `hello` command would give the required flag.

After you ssh into the challenge instance, the prompt `hacker@hello-intro-to-commands:~$` is seen.

In a previous example `whoami` is invoked by being typed into the prompt and pressing enter.

Therefore typing `hello` and pressing the enter key retrieves flag Intro to Commands

The description of the challenge states that invoking the `hello` command would give the required flag.

After you ssh into the challenge instance, the prompt `hacker@hello-intro-to-commands:~$` is seen.

In a previous example `whoami` is invoked by being typed into the prompt and pressing enter.

Therefore typing `hello` and pressing the enter key retrieves flag `pwn.college{cFfM4R08xoeC0bkugP-g0XtU6Vp.ddjNyUDL4kjN0czW}`.

Intro to Arguments

In the given example, arguments seem to follow the command after a space.

Since the description of the problem states that the command `hello` must be invoked with argument `hackers`, therefore `hello hackers` is entered in the prompt. This retrieves the key `pwn.college{QHM_qIaFN25B0Y09fkQyiyRvC5S.dhjNyUDL3YjN0czW}`.
